

RPSG Ventures Limited
Waste Management Policy

RPSG Ventures Limited ('RVL', "the Company") recognizes that every material has value not only at production and use but also at the end of life, the generation of any waste materials is the significant underutilisation of resources and products.

Unlocking this value through effective management of inputs and outputs viz. incorporating environmental considerations, while optimizing resource requirement in use, ensuring recycling, recovery of materials that can be reused.

The Company understands the importance of managing this waste without endangering human health and harming the environment including plants and animals.

The Company seeks to create an advantage through working with value chain members, customers and other stakeholders who impact the product lifecycle to innovatively drive resource productivity improvements, generate new value, avoid and reduce contamination and emissions, thus mitigating risks.

The Company along with its value chain members shall endeavour to:

- comply with legislative requirements related to responsible disposal of hazardous and non-hazardous waste as applicable;
- segregate waste at source and develop procedures to handle, store and transport waste safely;
- work with experts and stakeholders including communities and encourage recycling and recover end-of-life product life through remanufacturing;
- define waste reduction targets; and continually improve resource productivity by applying the **4 R approach i.e. reduce, reuse, recover and recycle**, where applicable;
- create awareness amongst employees and value chain members including customers and other stakeholders;
- explore sourcing and use of recovered, renewable, recyclable, biodegradable input materials including packaging and energy;
- reclaim waste and by-products in processes that can be used to reduce costs and increase resource productivity.
